

Manual gas bottle inspection system

The AIS202 gas bottle inspection system is especially designed to meet the needs of manufacturers who request a manual, reliable and efficient cylinder welding inspection system.

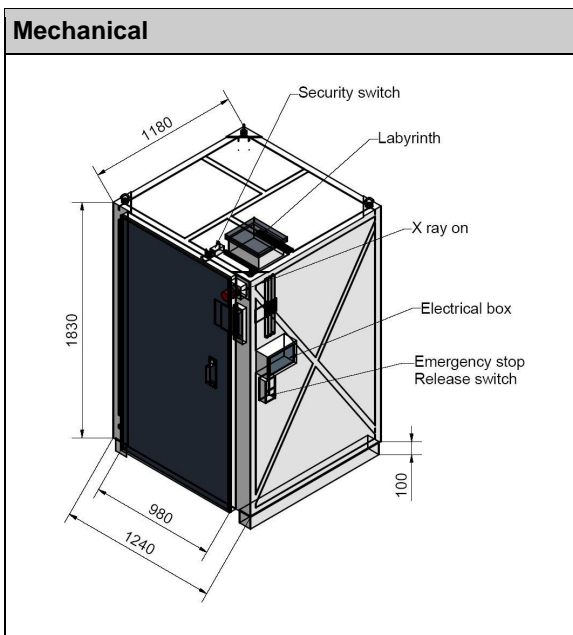

This shielded cabinet protects from X-ray radiations in compliance with the most stringent regulations: 0,5 µSv/h @ 10 cm from the surface for non professionals.

The cabinet is equipped with one large door for loading/unloading, installation and maintenance.

Our entire range of directional BALTOSPOT portable generators, driven by the CF2000 or the Hand-X control unit, can be fitted with the AIS202.

Specifications

Mechanical		
Approximated overall dimensions		
Length	mm	1360
Depth	mm	1340
Height	mm	2080
Door opening		
Width	mm	800
Height	mm	1700
